Future Day – Hotel Post through the eyes of the next generation

Medienmitteilung

- fanzun.swiss/future-day-hotel-post-through-the-eyes-of-the-next-generation/

What does a hotel room need to feel cosy and inviting? What does the kitchen have to offer? And what does the hotel need to withstand an earthquake? Six young people explored these questions at this year's National Future Day at Fanzun.

With our interior design interns Jenny Richards and Gaia Pagnamenta, the young people learned, among other things, what it takes for a guest to find a hotel room cosy and inviting. Then they got hands-on and designed their own room layouts.

Once their rooms were finished, the young architects travelled to Andeer to see the completed rooms at Hotel Post. The architect in charge, Andrej Turcan, described his sources of inspiration and his thought process. After a good lunch at the Hotel Post restaurant with bratwurst and Plain in Pigna (a traditional Engadin potato dish), where the young people looked back on what they had experienced, they returned to the office in Chur to focus on civil engineering.

Civil engineer Sharveen Rajah used a building model to explain what Hotel Post needs so that it does not collapse in an earthquake. Our draughtswoman Tanja Guggenbühl then let the Future Day participants dive into the world of 3D animation and CAD software themselves.

Dear future professionals, we hope you enjoyed our Future Day and that we will see you again soon as new apprentices at Fanzun!
