New Promulins care home is on track

Medienmitteilung

- fanzun.swiss/new-promulins-care-home-is-on-track/

The new building for the care home in Samedan is progressing as planned. At the end of January, residents moved into the added storey on the existing building (first construction phase). The demolition of the 1979 building has since been completed, and the shell construction has begun.

The care home consists of two parts: a building from the 1990s, which has been extended with an additional storey, and a replacement building for the existing 1979 structure. Everyone involved was delighted when, at the end of January, residents of the «Promulins» were able to move from the 1979 building into the newly built rooms in the added storey of the 1990s building and settle in. From the new rooms, they could watch the demolition of the 1979 building. After the asbestos was removed, it was demolished as planned, and preparatory work for the new building could then begin.

The concrete work for the floor slab is almost complete. Thanks to the great effort and commitment of the workers on site, the team is confident that the shell and roof can be finished before winter sets in. Despite the currently difficult environment of supply bottlenecks and rising material prices, the construction is therefore on track. The board of directors also approved innovative solutions for the residents' bathrooms, including height-adjustable and rotatable toilets, which promote residents' independence. If everything continues to go to plan, the new building can be occupied at the beginning of 2024.
