FANZUN

Initial Situation & Concept

Founded as a two-person start-up for precision laser measurement technology, Oblamatik needed a new water competence centre. A four-storey new building was erected in the Rossboden commercial area in Chur, reflecting the company's guiding principle: «We don't improve existing technologies, we search for and find new solutions.» Today, the building is the headquarters of Viega Schweiz AG.

Challenge

The multifunctional innovation and competence centre combines office, laboratory, storage and production areas under one roof for around 70 employees currently, and 100 in the future. The open and innovative corporate culture had to be reflected in both the construction and the technical systems.

Approach

Starting from the heart of the building, the «Thinktank» – a place for communication, interaction and creativity – a flexible working environment with an innovative layout unfolds. The façade consistently reflects the basic grid defined by the building programme. Naturally, it is a MINERGIE-P building.

Developer: Viega GmbH & Co. KG, Chur
Completion: 2019
Project type: New building
Project author: Fanzun AG
Construction costs: CHF 28,0 Mio
