

Workshop with building + Energy competence centre, Savognin

New structure

■ fanzun.swiss/en/referenz/werkhalle-und-kompetenzzentrum-bauenenergie-savognin_en/

Starting situation and idea

The premises of woodworking company Uffer Holz AG in Savognin was bursting at the seams and offered no scope for expansion. A new site was found at the entrance to the town, which offered space for future development of the company.

Challenges

The task was to build a representative workshop and logistics centre of Uffer AG as well as a competence centre for Building + Energy on an exposed site at the entrance to Savognin town. The structure had to express company philosophy and at the same time set an example for sustainable and energy-efficient building.

Approach

The building was divided into a production and logistics section with the height adjusted to road level. An intricate network wooden beams encloses the large building. Light-flooded cubes highlight the framework and the area of expertise of Uffer AG. The building offers superior workplaces with respect to ambience and use of natural light.

Developer: Uffer Holz AG, Savognin

Completion: 2011

Project type: New structure

Project author: Fanzun AG

Construction costs: CHF 8,0 Mio

Scope of services: Architecture, Civil Engineering, Structural Engineering, Acoustics, Energy, Development, Design, Project Management

Fanzun AG Architekten · Ingenieure · Berater
Ganzheitlich entwickeln, gestalten und realisieren.

Wir erwecken Ideen zum Leben.
